

# Catalogue of Australian Butterflies: Wings & Stings, and Victorian Entomologist.

Compiled by Kelvyn L Dunn (21 Dec. 1992), in Brisbane, Queensland

This catalogue, compiled in 1992, covers butterflies (Lepidoptera: Papilionioidea) mentioned by species name or genus (where this was the lowest classification provided) in the publications of the Entomological Society of Victoria Inc. (ESV), namely the Victorian Entomologist (VE) and its brief precursor, Wings & Stings (WS). Citations are listed in reversed chronological order by year and month. Each citation includes the author, journal's code (VE or WS) and article's page numbers within which the mention occurred one or more times. The exact page number of the citation(s) within an article is not necessarily specified (except where contributions involved a single page only). Citation of butterflies in Minutes, Exhibits and Meeting notes are also included. However stand-alone collector/establishment request species lists not associated with any other data, surveys, projects or information (eg. Nebois 1972 VE 2(4):8-10) have not been included.

Butterfly names follow Dunn & Dunn 1991, *Review of Australian Butterflies*, the current source at the time of this compilation. Some names used in the past were markedly different to contemporary names due to historic taxonomic changes, or due to serious misspellings, and creative of potential confusion. In these cases the cited name or spelling is indicated in brackets and listed with the appropriate species to which I judged it belonged. Generic names are only listed where references could not be assigned to species. The list does not include references to populations or species beyond political Australia, although some are mentioned in the VE in the years covered. Some Australian species have no citations in the news bulletins as of up to 1992, and these appear without details (Nil) under the species names.

## Acknowledgements

Daniel Dobrosak provided complete copies of selected early editions of the *Victorian Entomologist* where the compiler's copies were incomplete or missing, and Mark Hunting provided photocopies of the full set of *Wings & Stings* for the compilers use.
